

Project Deliverable 1 (Project Proposal)

Deliverable 1 is your project proposal. You must adhere to the following System Request Template. **This deliverable is graded out of 30 points. You must submit it as a PDF on Gradescope. One member of your group can submit the proposal on behalf of the group; we will then configure groups accordingly.**

1. Project Title (1 point):

CourseBranch

2. Project Team (1 point):

Name	BU ID	Role
Áron Kocsis	U60318679	Leader
Rudolf Rissling	U10606359	Leader
Jack Weber	U97268134	Leader
Diego Escobedo Ruiz	U18497380	Leader

3. Project Description (3 points):

The project is focused on creating a platform that creates visual representation of progress and requirements of courses for students. It would also include user reviews for classes and professors individually. The main purpose of the project would be to create an accessible platform, which would make it easier for the student to understand their progress in their major, and decide which classes to take on which semester. It would be a significant project because it would make the process of registering for courses more intuitive for students, and they would be more informed in their decision.

4. Business Goals (5 points):

We will create value by being attractive to students at different universities as a simple way to visualize and plan for their college experiences. The same way that MyBU student portal creates an ease of access for students at BU. Ideally our customers would be universities that need a framework for their prospective students.

5. Main Features/Engineering Objectives (7 points)

Specify the key features and functionalities that the system will offer. Provide detailed and specific information. Include all the features and functionality you believe this system should have.

A parser/scraper for course requirement information

A tree visualization GUI {Some sort of graphing algorithm (Dijkstras, Bellman-Ford, etc.)}

A rating system

Secure / Values data privacy

6. Scope (3 points):

Clearly state what is within the project's scope and what is not.

IN SCOPE:

Parsing requirements

Making a graphical representation

Some sort of user input

Course recommendations?

Course Branch library (popular user uploaded course branches)?

Rate my professor integration?

Hub Credits

OUT OF SCOPE:

Don't re-create rate my professor

No BU Internal API data, only from publicly accessible websites (e.g can use course selection page not internal api)

7. Stakeholders (3 points):

List all stakeholders involved in or affected by the project. This may include users, administrators, customers, etc.

Students, professors, universities, academic advisors.

8. Constraints (3 points):

Highlight any constraints or limitations that may have impact on the project, such as budget, time, design or technical constraints, implementation, resources, etc.

Our biggest constraints are time and data accessibility. For time, we only have one semester to implement all the main features. For data accessibility, there is no guarantee that we will be able to gather all the necessary data in order to fulfill the requirements for the projects. Some universities might not provide sufficient information for our system to work efficiently.

9. Risks (2 points):

Identify potential risks that the project might face and provide a brief description of how they will be managed or mitigated.

Working with a university, like Boston University, is always risky and revolves around a very highly bureaucratic and bloated system. They have the complete ability to shut down the project at any time at will.

Courses change frequently and we need to capture that behavior so as to not display incorrect information.

10. Appendix (2 points):

Include any additional documents or reference materials that support the System Request. **Include your GitHub repository URL in the appendix.**
